

Rubber Ring Seals for Pipes

Manufacturing to Customer Specifications

Every customer has unique needs for their product. ALP understands this and has the capacity to meet a wide range of product specifications.

Our skilled engineers have the knowledge needed to work through requirements provided to ensure the best product for the application can be developed and produced.

Custom Lengths and Profiles

Product can be manufactured to design tolerances in any length, shape and size.

Joins and Gaps

Product can be supplied as a joined loop or as a cut length that has a tolerated gap. Joined loop rubber seals products are made using superior vulcanized joints, not via a weaker glued join.

Compression and Deflection

Skilled material selection, development and testing by our experienced engineers ensures correct compression and deflection will result in easy and secure fitment, and appropriate sealing specified.

Custom Rubber Compounds

Product and compound development is all done in-house. Compounds include EPDM, NBR and SBR.

World Class Quality Product and Service

ALP's Quality Management Systems conform to international **IATF-16949-2016** and **ISO-9001-2015** standards for supplier management and manufacturing management. Quality is assured across our entire manufacturing process.

Quality checking by skilled engineers begins with the testing of raw materials received from suppliers and ends with final inspection and testing.

Manufacturing processes are certified internally at each step with 100% of products going through various in-process inspections.

Customers can expect consistency in product quality and the highest level after-sales support.
