

Why a Cord & Wire Cut-Out Tool?

The auto glass in today's modern vehicles have tighter tolerances between the glass and the body. It is becoming quite impossible on

some vehicles to avoid damage to the pinchweld when removing the glass. Many technicians have started using cut-out wire or cord in an effort to save the pinchweld from possible damage. This will save valuable time in priming and

will prevent rust from forming on missed areas of damage.

Also, cord /wire removal tools reduce physical strain on technician's body compared to other removal tools.

WRD-4RD 4" Companion Dock Kit

The 4" Dock is a companion* kit for quarter glass panel removal. It is designed for safe and efficient side glass panel extraction. Its small form factor allows for use on a wide range of small panels and applications. The WRD 4" Dock uses high tack 3M pads to temporary fasten a winding point to glass panels or vehicle surfaces. Its unique design combines a centre pulling point together with an anchoring/feeding solution.

* Depends on additional components found in primary WRD removal systems for operation.

✦ Great for feeding cord around or under moulds

Cord is for close fitting and difficult auto glass removals. It ensures no paintwork damage around glass and vehicle bodywork. Most cords can be re-used several times.

Square wire is the strongest and provides the least resistance.

Braided wire cuts with a sawing action.
